

205-885-9086

This message is brought to you by Lev Aharon Bikur Cholim in consultation with our Rabbinical and medical boards.

We are receiving many requests for help from people who have become ill with covid and are not receiving proper care in the hospital, and in fact are being given dangerous treatments. Therefore we wish to alert the tzibur about some basic, critical information, for the safety of your loved ones.

Number one, the safest course of action when one feels any symptoms that could possibly be covid, is to immediately treat with the safe and effective early treatment protocols. Every community has volunteers who can guide people to the professionals who know how to treat. To hear a recorded hotline with numbers of the lifesaving volunteer organizations around the world, please call Lev Aharon Bikur Cholim at 205-885-9086.

MOST REGULAR DOCTORS DO NOT KNOW HOW TO TREAT COVID. They follow the government who claims that there is no treatment and people should stay home until they have trouble breathing and then go to the hospital. That is a recipe for disaster. Early and proper treatment with the proven combination of medications and vitamins has been shown by tens of thousands of cases to remove almost all need for hospitalization, even among the elderly.

Secondly, if one is feeling worse chas veshalom and is considering hospital care, please note that your local hospital is not the solution (unless in an acute emergency). Rather, one should still try to consult with the experienced covid treatment organizations for lifesaving advice. The patient may still be able to receive treatment at home, even if he requires oxygen as he recovers. These lifesaving medications and nebulizer treatments that one can take at home will NOT be given in most hospitals. If hospitalization is indeed necessary, one must know WHICH hospital to go to and which ones to avoid, as many hospitals are simply killing fields, Rachmana litzlan. It is sometimes possible to transfer from a bad hospital to a better one, but not always, and it can be very difficult, so starting off in the right hospital can make the difference between life and death.

Thirdly, IT IS CRITICAL TO KNOW THAT EVEN THE "GOOD" HOSPITALS ADMINISTER THE HIGHLY TOXIC AND USELESS IV DRUG REMDESIVIR. They call it an "antiviral" but it has NOT been shown to reduce mortality from covid at all. Instead, it often causes kidney failure and fluid on the lungs, which can result in death. The only ones who benefit are the hospitals, who earn a 20 percent bonus on the patient's entire hospital bill if they give Remdesivir. Indeed, the hospitals are being paid to kill. Here is the story: For giving covid tests, the hospital is paid by the government. For treating with Remdesivir, another payment. For putting the patient on a ventilator, another payment, and for listing Covid as the cause of

death on the death certificate, again more money. The total payment the government gives to the hospital for each patient that they manage to kill is about 100,000 dollars.

If hospitalization is needed, please try to consult with the experts who can guide you as to which are the safer hospitals, and even in the "better" hospitals, you must know to ABSOLUTELY REFUSE remdesivir for yourself or your loved one.

We must also inform you that not only is there NO POINT in taking a "booster", as the shots are not offering any protection right now and in fact, more vaccinated people are getting sick, because the shots greatly weaken the immune system, but tragically, also, many people are passing away immediately after their vaccine or booster, within a matter of days or weeks. This has been seen in many Jewish communities around the world, including in NY, NJ, and Eretz Yisrael. We have spoken several times with someone connected to a Chevra Kaddisha in NY, and he says that people are dying at a higher rate than before, healthy middle aged people are dying suddenly at home which almost never used to happen, and upon questioning, his people find that 90 percent of the deaths are vaccinated.

If you are aware of a tragedy that has happened after the covid shot, you are required by halacha to come forward and publicize it, so that other lives may be saved. Lo saamod al dam re'echa. We spoke to Daas Torah and were told it's the biggest rishus to stay quiet when a family member is damaged or killed by the shot. So, PLEASE, if you know something, SAY SOMETHING. Tell your friends, be brave, for the sake of Hashem, don't stay quiet. You can also report adverse events to covshotadverseevents@gmail.com.

Our last message is for those who are administering these shots, or requiring them, whether you are doctors, pharmacists, nurses, or heads of Mosdos, etc. Yesh din v'yesh Dayan, Osid litain es hadin. Not only in Bes din shel Maala, but down here as well. When all the sheker is fully exposed, as is beginning to happen, there will likely be Nuremberg style trials for those who administered and those who forced others to take poisonous shots. It will not be a valid excuse to say "I was just following orders". Please have rachmanus on yourself and on others and ignore financial incentives to give or receive this shot while endangering your health and that of others. Be strong, make the right choices, and stay true to Hashem and the Torah, as our Gedolim have done throughout the generations, whether under the Yevanim or the Communists.

Remember, for a list of organizations around the world that you can call for help if sick with covid, needing treatment, or needing a better hospital, call Lev Aharon's recorded hotline 24 hours a day at 205-885-9086. May Hashem send a shmira Elyona and healing to the entire world bekarov b'viyas go'el tzedek bimheira veyameinu amen.
