

Dr. Joe Ladapo, Florida's Surgeon General (thanks Governor DeSantis), recommends against COVID mRNA vaccine in males 18-39 years, citing increased risk of myocarditis etc. Excellent move!

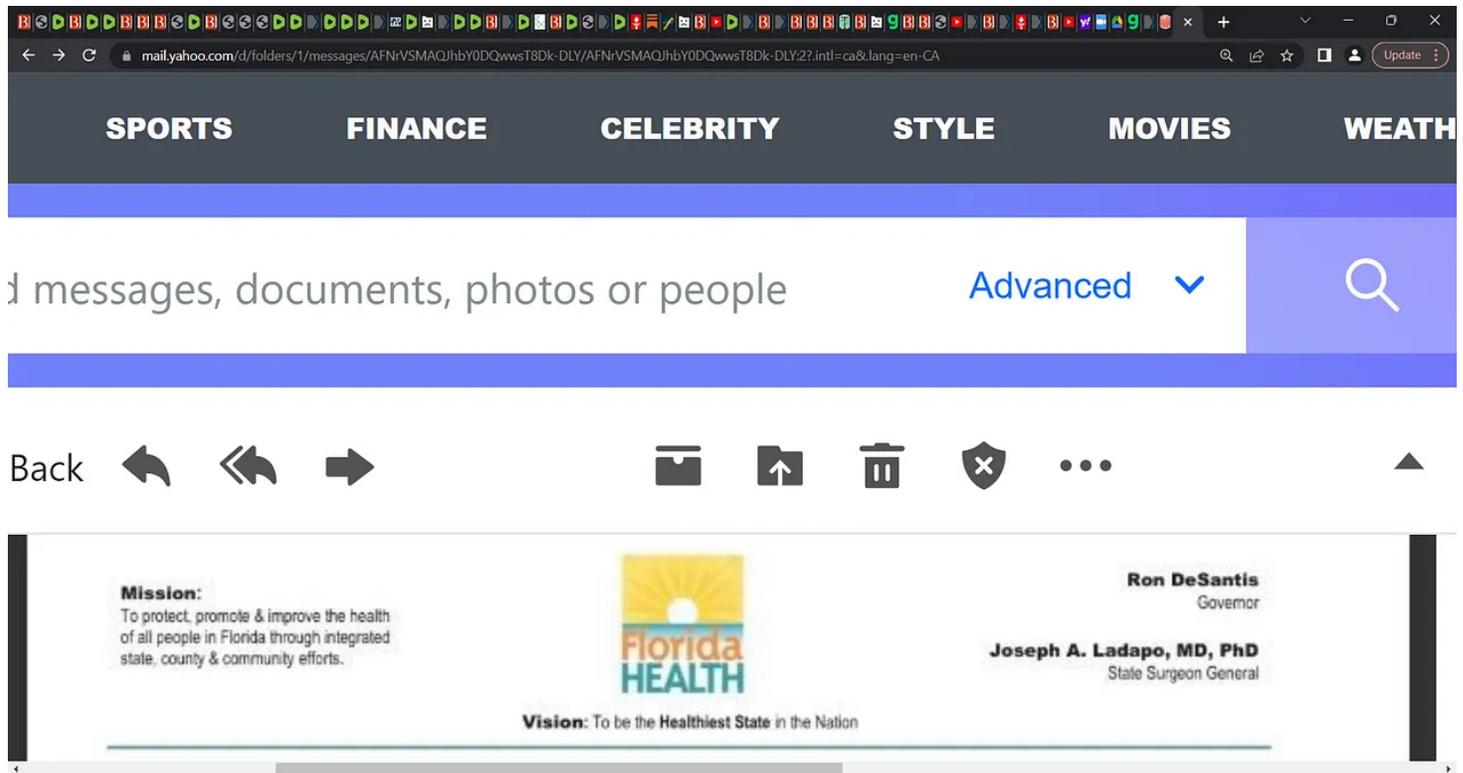

Once again, SG Ladapo shows the type of balance, finesse, study of the relevant data to make an informed decision, driven by both the benefits and risks of the intervention; huge praise!

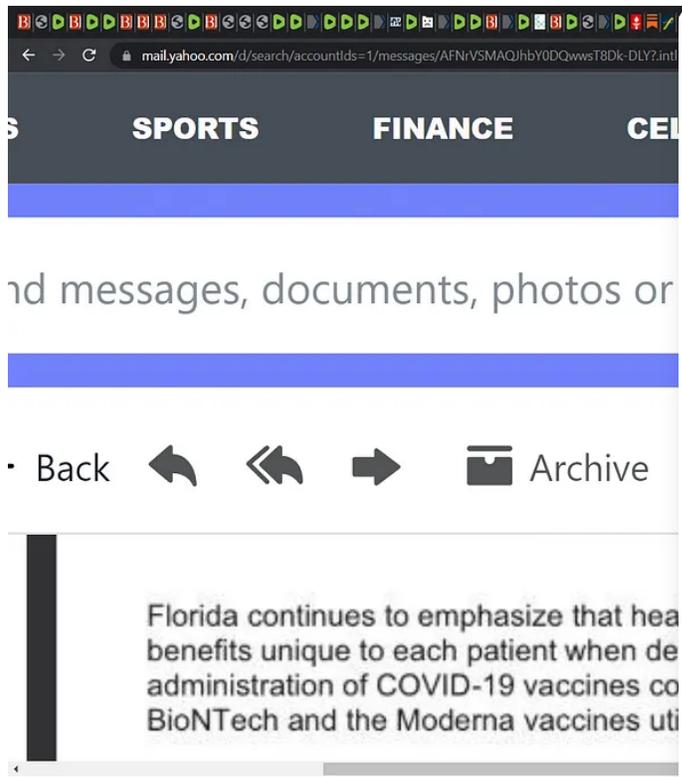

Dr. Paul Alexander
Oct 8

“Florida’s Surgeon General Joseph Ladapo, MD, Ph.D. yesterday issued a concerning tweet declaring the release of a state-sponsored analysis of the COVID-19 mRNA vaccines he believes the public should be aware exists. In this analysis, the state claims that the COVID-19 mRNA vaccines increase the risk of cardiac-related death among men aged 18 to 39 by 84%, and in a message defiant to the federal government, declared, “FL will not be silent on the truth.”

Based on currently available data, patients should be informed of the possible cardiac complications that can arise after receiving a mRNA COVID-19 vaccine. With a high level of global immunity to COVID-19, the benefit of vaccination is likely outweighed by this abnormally high risk of cardiac-related death among men in this age group.

The State Surgeon General now recommends against the COVID-19 mRNA vaccines for males

The State Surgeon General now recommends mRNA vaccination for ages 18-39 years old.

Individuals and health care providers should consider the following:

- Males over the age of 60 had a 10% increase in risk of hospitalization or death from COVID-19 with mRNA vaccination.

mRNA vaccination.

- Non-mRNA vaccines were not found to have these increased risks among any population.

Floridians are encouraged to discuss all the potential benefits and risks of receiving mRNA COVID-19 vaccines with their health care provider. The risk associated with mRNA vaccination should be weighed against the risk associated with COVID-19 infection.

<https://www.trialsitenews.com/a/florida-surgeon-general-guidance-males-18-39-should-avoid-covid-19-mrna-vaccines-based-on-self-controlled-case-series-study-0100db16>

Trialsite news:

“In what is a bombshell move, the State Surgeon General has announced that the 18 to 39 age cohort not getting the mRNA vaccine (and that any individuals diagnosed with preexisting conditions (including pericarditis) take note of these findings and make an informed decision.”

Ladapo went on the record:

“Studying the safety and efficacy of any medical intervention is a core component of public health,” said Surgeon General Mandy Cohen. “We have been paid to safety, and the concerns of many people are valid. These are important findings that should be communicated to the public.”

Dr. Avery Brinkley Jr MD FL GA:

‘1. The shots have killed more people than have been saved. The PCR 'test' which was not meant to be used for diagnosis (invented it, stating it was simply an easy way to detect the presence of other protein fragments found in the nasal cavity). It should not be used to diagnose Covid or any other virus.

2. More harms due to these gene therapy agents are oncoming given the disruption of the immune system by mRNA, Spike and LNPs which have been shown to circulate for many months after injection (even cross the placenta and excreted in breast milk) causing autoimmune diseases, neurologic and vascular diseases, increased vulnerability to future variants and other viruses including reactivation of dormant viruses (Shingles, Herpes, CMV), increased cancer rates and aggressivity related to blocking toll-like receptors, and disruption of normal fertility, decidual cast formation and harm to the fetus.

3. Severe disease and hospitalization has now been shown to be higher in those having received the shots than those who have not (due to immune imprinting).

4. We have had evolving early treatment (and prophylaxis) which has virtually no side effects since late Spring of 2020---Paxlovid and Molnupiravir have no efficacy and have potential harms (and trials not meeting usual testing criteria). None of the above comments are conjecture.’
